All rights reserved. No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information and retrieval system, without permission in writing from the Motorcycle Safety Foundation® (MSF®). Under no circumstances may the material be reproduced for resale. Please send request by email to: training-systems@msf-usa.org.

Portions of this book may be reproduced by the Motorcycle Safety Foundation certified RiderCoaches solely to facilitate their presenting this MSF Basic RiderCourse℠. Under no circumstances may a RiderCoach reproduce this material in its entirety.

The MSF Basic RiderCourse is based on years of scientific research and field experience. This current edition has been field-tested and has proven to be successful in developing the entry-level skills for riding in traffic. Through its various iterations, over seven million riders have been trained since 1973.

The information contained in this publication is offered for the benefit of those who have an interest in riding motorcycles. In addition to the extensive research and field experience conducted by the MSF, the material has been supplemented with information from publications, interviews and observations of individuals and organizations familiar with the use of motorcycles and training. Because there are many differences in product design, riding styles, and federal, state and local laws, there may be organizations and individuals who hold differing opinions. Consult your local regulatory agencies for information concerning the operation of motorcycles in your area. Although the MSF will continue to research, field-test and publish responsible viewpoints on the subject, it disclaims any and all liability for the views expressed herein.

The Motorcycle Safety Foundation® is the internationally recognized developer of the comprehensive, research-based, Rider Education and Training System (RETS). RETS curricula promotes lifelong-learning for motorcyclists and continuous professional development for certified RiderCoaches℠ and other trainers. MSF also actively participates in government relations, safety research, public awareness campaigns and the provision of technical assistance to state training and licensing programs. The Motorcycle Safety Foundation is a national, not-for-profit organization sponsored by BMW, BRP, Harley-Davidson, Honda, Indian Motorcycle, Kawasaki, KTM, Suzuki, Triumph and Yamaha.
# Table of Contents

**Welcome**

**Section 1. Course Introduction**
- Course Requirements: 1
- Risk and Responsibilities: 1

**Section 2. Motorcycle Types**
- Street Motorcycles: 2
- Dual-Purpose Motorcycles: 3
- Off-Highway Motorcycles: 3

**Section 3. Controls, Indicators and Equipment**
- Primary Controls: 4
- Other Controls: 5
- Indicators and Equipment: 5

**Section 4. About Basic Operation**
- Engine Start and Stop: 8
- Clutch Lever and Friction Zone: 8
- Riding Posture: 8
- Basic Turning: 9
- Braking to a Stop: 10
- Shifting: 11

**Section 5. Preparing to Ride: The Four Preps**
- Motorcycle Fit: 12
- Motorcycle Inspection and Maintenance: 12
- Personal Protective Gear: 13
- Mental Attitude: 17

**Section 6. Risk and Riding**
- Risk Awareness: 18
- Risk Acceptance: 18
- Risk Management: 18
- Self-Awareness: 19

**Section 7. Basic Street Strategies**
- Positioning: 20
- Being Visible: 21
- An Active Strategy: 22
### TABLE OF CONTENTS

- Mental Processing 24
- Escape Paths 25

#### Section 8. Strategies for Common Riding Situations
- Intersections 26
- Between Intersections 26
- Blind Spots 27
- Lane Changes 28
- Freeway Merging and Exiting 28
- Curves 28
- Limited-Space Maneuvers 30
- Starting on a Hill 31
- Obstacles 31
- Parking 31
- Road Furniture 31
- Passing 32
- Tailgaters 32
- Night Riding 32
- Group Riding 33

#### Section 9. Basics for Emergencies
- Braking Systems 34
- Emergency Stop in a Straight Line 34
- Emergency Stop in a Curve 34
- Front Tire Skid 34
- Rear Tire Skid 34
- Swerving 35
- The Brake or Swerve Decision 35

#### Section 10. Special Riding Situations
- Road Surfaces 36
- Carrying Passengers or Cargo 37
- Touring 38
- Wind 38
- Animals 38
- Maintenance and Emergency Issues 38

#### Section 11. Rider Impairments
- Alcohol 40

Welcome to the world of motorcycle riding. The Motorcycle Safety Foundation® (MSF) and your course sponsor want you to learn to be the wisest rider possible. We want motorcycling to be seriously fun for you. Serious because there is risk involved. Fun because riding a motorcycle is a joy.

If you are new to riding, welcome to the challenge. You must be able to balance a two-wheel bicycle before riding a motorcycle in this course. The Basic RiderCourse™ (BRC) will help you learn the physical and mental skills required to enjoy riding to the fullest as well as challenge you to be the best you can be as a lifelong learner.

If you are a returning rider who has not ridden for some time, welcome back. This course will help you renew skills that can improve your safety and risk management, and make riding more fun.

If you are an experienced rider here to earn your license or endorsement, you will fine-tune your skills and learn new strategies for the road. Challenge yourself to master the basics. Be a good example for the new riders.

This is the Basic RiderCourse, so it provides the basics. The classroom activities introduce the mental and perceptual processes needed to be a good rider and show you how to process information and make safe decisions. The riding sessions have you practice basic control that includes clutch and throttle coordination, straight-line riding, stopping, turning, and shifting. Also included are quicker stops, curves, and swerves. It is important not only to be healthy, but to have enough fitness, strength, and coordination to learn well and manage the physical demands of riding a motorcycle.

Your RiderCoaches are here to guide you. Ask a lot of questions and let them know how to help you. You will have your questions answered and your progress observed. In the classroom, there will be discussions supported by a variety of activities. On the range, the off-street riding area, you will work on skills to help you handle common riding tasks.

This course will provide a good start, but it is important for you to continue to practice the basics of riding on your own motorcycle. The MSF offers more advanced training as part of its complete Rider Education and Training System™. You want to keep your skills fresh. You want to be sharp. After you have successfully completed the Basic RiderCourse, a good next step after getting licensed is to enroll in the MSF Street RiderCourse or Basic Bike Bonding RiderCourse, and consider our online courses too. Check with your RiderCoach about availability.
COURSE REQUIREMENTS

Successful completion of the BRC requires you to: (1) complete all course assignments, (2) attend all sessions in their entirety, (3) pass a knowledge test, and (4) pass an on-motorcycle skill test that consists of exercises from the course. Note your course schedule and directions to the riding range here:

____________________________________________________________________________________

____________________________________________________________________________________

____________________________________________________________________________________

Completing the BRC does not guarantee you will be safe on the road. You are responsible for your own safety. This course provides the basics that allow you to continue to practice your skills and strategies on your motorcycle. Besides following legal requirements, safe riding is a matter of riding within your limits, and only you can choose to do that. You might even decide that riding a motorcycle on the street is not right for you.

RISK AND RESPONSIBILITIES

Safety and learning are responsibilities shared by you, your RiderCoaches, and your classmates. You are not competing with anyone else in this course so you should focus on your own learning. Ultimately, you are responsible for your own safety and learning. You must let a RiderCoach know if you become uncomfortable or are thinking about leaving the course. There is nothing wrong with that choice. Choose safety first.

Your safety is the highest priority in the Basic RiderCourse. RiderCoaches must continuously observe and evaluate you to ensure you meet minimum aptitude requirements for your safety and the safety of others on the range. Because learning a motor skill is an inherently risky activity, there may be instances when a participant loses control.

The Basic RiderCourse is conducted at a pace that results in successful completion for most new riders. The RiderCoaches will help you learn to the best of your ability, but if you have a lot of difficulty or become a risk to yourself or others on the riding range as determined by you or your RiderCoaches, you will not be permitted to continue to ride. If this happens, your pursuit of learning to ride may not be over, as many students are successful on a second attempt, and other learning options may be available. RiderCoaches will do their best to keep your experience positive.
SECTION 2. MOTORCYCLE TYPES

Introduction: A motorcycle is a single-track, two-wheel vehicle designed to be straddled by its rider and having handlebars for control, but variations exist such as three-wheel designs. The three basic motorcycle types are: (1) street, (2) dual-purpose, and (3) off-highway. Street motorcycles are designed for use on public streets. Dual-purpose motorcycles can be used on the street or on off-highway trails. Off-highway motorcycles are not street-legal. Each type of motorcycle is available in a variety of styles and sizes. For example, street motorcycles include cruisers, sport bikes, and touring bikes. Shopping to find the right one for you can be a lot of fun. See below for motorcycle characteristics.

STREET MOTORCYCLES

Standard
• All around capabilities
• Sometimes called a naked bike (minimum use of body panels)
• Straight-up seating position
• Various engine sizes

Sport
• Body panels and fairing for aerodynamics
• Rear-positioned footrests
• May have higher power-to-weight ratio
• Forward-leaning seating position

Cruiser
• Usually has “classic” styling
• Forward footrests
• Swept back handlebars
• Rearward-leaning seating position

Touring
• Designed for comfort and riding longer distances
• Large engine
• Large wind-deflecting fairing
• Heavier than most other motorcycle types
• Bags for additional storage space

Scooter
• Step-through design, often with under-seat storage
• Usually has smaller wheels
• Most have automatic transmission
SECTION 2. MOTORCYCLE TYPES

DUAL-PURPOSE MOTORCYCLES
- Used for both street and off-highway riding
- Various engine sizes, up to large adventure-touring models
- Tall seating and straight-up seating position
- Special tires provide grip on pavement and dirt
- Extra ground clearance and long-travel suspension

OFF-HIGHWAY MOTORCYCLES

Enduro
- Recreational riding in forests or deserts
- Some have a headlight and taillight

Motocross
- Closed course competition over bumps and jumps

Trials
- Low-speed competition over challenging obstacles
SECTION 3. CONTROLS, INDICATORS AND EQUIPMENT

Introduction: Hands and feet are used to operate and control a motorcycle. You must know the location and operation of the primary controls and be smooth and precise when using them. The controls and equipment described here are for motorcycles with a gasoline-powered engine and a manual transmission. (Some motorcycles have an electric motor and/or automatic transmission.)

PRIMARY CONTROLS

There are six primary controls. You should know the location and function of each control. You will practice using these on the range.

Handlebars: Used to control direction of the motorcycle. There is a handgrip on each end.

Throttle: The right handgrip, which rotates to control engine speed. To increase engine speed, twist it toward you (roll on). To decrease engine speed, twist it away from you (roll off). The throttle springs back to the idle position when released.

Clutch Lever: In front of the left handgrip. It is operated with the fingers of the left hand. The clutch mechanism connects power from the engine to the rear wheel. The lever is squeezed in to disconnect and eased out to connect. When the clutch lever is squeezed in, there is no engine power going to the rear wheel. Scooters and some motorcycles do not have a clutch lever because they have an automatic transmission.

Gearshift Lever: On the left side of the motorcycle in front of the left footrest. It is operated with the left foot. Lift up firmly and release to go to a higher gear; press down firmly and release to go to a lower gear. It shifts one gear with each lift or press, and only needs to move up or down an inch or so. When released, it returns to its center position for the next shift. Most motorcycles have five or six gears with 1st gear at the bottom. Neutral is between 1st and 2nd gear and is selected by either a half lift from 1st gear or a half press from 2nd gear. Most scooters and some motorcycles do not have a gearshift lever because they have an automatic transmission.

Front Brake Lever: In front of the right handgrip and operated with the fingers of the right hand. Squeeze it in to operate. It is used a bit differently than the clutch lever as it doesn’t reach the handgrip, and the amount of squeeze must be adjusted for effective braking. While learning to ride, keep your fingers wrapped around the handgrip for throttle control and so you can learn to reach-and-squeeze the front brake lever when needed.
Rear Brake Pedal: In front of the right footrest and operated with the right foot. Press down to operate it.

OTHER CONTROLS

The location and operation of other controls may vary. The best source of information is the motorcycle owner’s manual. Other controls include:

Fuel Supply Valve: Usually under the fuel tank. It controls the flow of gasoline to the engine. Common positions are: On, Reserve, and Prime or Off. Reserve allows access to a small amount of fuel after the main supply is depleted. Prime permits direct fuel flow, and the valve should not be left in this position after its use. Some motorcycles do not have this valve because the engine is fuel-injected, and gasoline only flows when the ignition switch is On and the engine is running.

Ignition Switch: Often located near the instrument cluster. Positions include On, Off, and Lock, and some include a Park position. The Lock and Park positions engage the steering lock and allow the key to be removed. The Park position turns on the taillight for better visibility when parked for a short time on the side of the road. The switch may also have an Accessory position.

Choke Control: Located on the handlebars or near the engine. It provides an enriched fuel mixture to help start a cold engine. It also raises the idle to permit the engine to warm quickly. It should be turned Off as soon it is no longer needed. Fuel-injected motorcycles do not have a choke control.

Engine Cut-off Switch: Near the right handgrip and operated with the thumb. It allows you to shut off the engine without removing your hand from the handgrip.

Turn Signal Switch: Usually located near the left handgrip and operated with the thumb. Some signals cancel automatically after a turn or lane change.

INDICATORS AND EQUIPMENT

Motorcycles include indicators that display information. They also have equipment to aid in safe operation and to communicate with others.

High/Low Beam Switch: Near the left handgrip and operated with the thumb. It is used to select high or low beam for the headlight.

Horn Button: Located near the left handgrip and operated with the thumb.

Engine Start Button: Located near the right handgrip and operated with the thumb.

Speedometer: Part of the instrument cluster and shows road speed.

Odometer: Part of the instrument cluster and shows miles ridden. There may also be a re-settable trip meter, which can be used to display miles traveled since the last fill-up or the last stopping point.

Tachometer: Indicates engine speed in revolutions per minute (rpm). It has a red line for maximum engine speed that should never be exceeded.

Indicator Lights: May include neutral, high beam, turn signal, oil pressure, side stand down, and more. Check the motorcycle owner’s manual.

Motorcycle Lights: Includes headlight, turn signals, taillight, and brake light. Check for proper operation. Be sure that squeezing the front brake lever and pressing the rear brake pedal illuminate the brake light.

Mirrors: Help you see what is behind you. Motorcycles have convex mirrors that are curved to provide a wider view but make objects look farther away. Convex mirrors may reduce the size of blind spot areas, but they do not eliminate them.
**Side Stand:** Supports the motorcycle when parked. Some motorcycles may also have a center stand that keeps the motorcycle upright and more stable, with the rear tire slightly off the ground. This is helpful for some maintenance procedures.
